This Zenodo deposit contains a publicly available description of the Dataset:

"Golgi-IP, a tool for multimodal analysis of Golgi molecular content".

Dataset Description:

Quantitative DIA-based proteomic analysis of Golgi-IP in HEK293 cells. The data set contains six replicates of GolgiTAG-IP, Control-IP, GolgiTAG whole cell extract and Control cells whole cell extract. The mass spectrometry data is acquired using variable data independent acquisition (vDIA) on an Orbitrap Exploris 480 mass spectrometer. Database searches performed against Human Uniprot database using Spectronaut search algorithm.

ASAP Team: Alessi

Dataset Name: alessi-invitro-ms-p-hek293-gtip, v1.0

Principal Investigator: Dario R. Alessi, d.r.alessi@dundee.ac.uk

Dataset Submitter: Dr. Raja Nirujogi, Dr. Toan Phung, r.nirujogi@dundee.ac.uk; TPhung001@dundee.ac.uk

Publication DOI: 10.1073/pnas.2219953120

Grant IDs: ['ASAP-000463']

ASAP Lab: Dario Alessi

ASAP Project: Mapping the LRRK2 Signalling Pathway and Its Interplay with Other Parkinson's Disease Components.

Project Description: LRRK2 targets and modifies a set of enzymes known as Rab GTPases, triggering new biological events by creating new protein: protein interactions. We aim to decipher what controls the activity of LRRK2 and to explore, in precise molecular detail, how this enzyme affects three major cellular structures (cilia, lysosomes and mitochondria) implicated in Parkinson's disease. We showed that mutant LRRK2 triggers a series of molecular changes that cause new sets of proteins to interact. Our goal is to use a combination of state-of-the-art approaches to understand the consequences of these new interactions on the biology of three important subcellular compartments: primary cilia, lysosomes, and mitochondria.

Submission Date: 2025-10-14

This research was funded by the Aligning Science Across Parkinson's Collaborative Research Network (ASAP CRN), through the Michael J. Fox Foundation for Parkinson's Research (MJFF).
