

This Zenodo deposit contains a publicly available description of the Dataset:

" α -Synuclein PFF mouse cortex GeoMx".

Dataset Description:

Segments were captured from specific cortical layers of wildtype mice injected with α -synuclein PFFs in the dorsal striatum, capturing whole transcriptomes from neurons positive for α -synuclein inclusions, or negative for α -synuclein inclusions using the GeoMx WTA platform.

ASAP Project: Understanding and manipulating cellular and circuit-level vulnerability to neurodegeneration in Parkinson's disease

Project Description: Persons with Parkinson's disease often experience cognitive decline and dementia that is well correlated with Lewy pathology in the neocortex. To address how PD impacts cognition, we study the impact of cellular pathology on cortical transcription, connectivity, and function. First, we determine how pathology causes the breakdown of synapses, the cellular structures that connect neurons into networks. Second, we establish links between pathology, dysregulated gene expression, and altered neuronal activity. Third, we use mathematical modeling to understand regional vulnerability. Our findings aim to reveal the molecular dysfunctions and cortical network aberrations that contribute to cognitive impairments in PD.

Submission Date: 2026-07-29

This dataset is made available to researchers via the ASAP CRN Cloud: cloud.parkinsonsroadmap.org. Instructions for how to request access can be found in the [User Manual](#).

This research was funded by the Aligning Science Across Parkinson's Collaborative Research Network (ASAP CRN), through the Michael J. Fox Foundation for Parkinson's Research (MJFF).

This Zenodo deposit was created by the ASAP CRN Cloud staff on behalf of the dataset authors. It provides a citable reference for a CRN Cloud Dataset
