

This Zenodo deposit contains a publicly available description of the Dataset:

"Bulk RNA sequencing of human post-mortem brain tissue from Parkinson's disease and control donors".

Dataset Description:

Bulk RNA-seq data from 234 samples derived from PMDBS samples across Substantia Nigra, Caudate, Putamen, Parahippocampal Gyrus, Cingulate Cortex, Temporal Cortex, Frontal Cortex, Parietal Cortex Types of Samples: (Braak 3-4) PD and control post-mortem brains.

Dataset Name: wood-pmdbs-bulk-rnaseq, v1.1

Principal Investigator: Mina Ryten mina.ryten@ucl.ac.uk

Dataset Submitter: Jonathan Brenton jonathan.brenton.14@ucl.ac.uk

Publication DOI: NA

Grant IDs: [ASAP-000509]

ASAP Lab: Ryten Lab

ASAP Project: Mapping the PD brain: Oligomer-driven functional genomics

Project Description: To determine the molecular and cellular process that lead to PD, a powerful approach is to single out and study the cells where the disease originates. To achieve this goal, we use alpha-synuclein oligomers as a cellular biomarker to identify the right cells. We then apply state of the art genomic and genetic analyses to identify genes and proteins that form the disease pathways. These data provide RNA sequencing data on several regions (reflecting area most to least affected by PD pathology) sampled from 18 early-mid stage PD (Braak stage 3/4) brains (without dementia) and 20 aged-matched normal brains.

Submission Date: 2024-12-11

This dataset is made available to researchers via the ASAP CRN Cloud: cloud.parkinsonsroadmap.org. Instructions for how to request access can be found in the [User Manual](#).

This research was funded by the Aligning Science Across Parkinson's Collaborative Research Network (ASAP CRN), through the Michael J. Fox Foundation for Parkinson's Research (MJFF).

This Zenodo deposit was created by the ASAP CRN Cloud staff on behalf of the dataset authors. It provides a citable reference for a CRN Cloud Dataset
